CZone 3 Module Smart Harness

Product code: 80-911-0172-00

CZone utilizes the industry standard NMEA 2000 network for its communication protocol.

The 3 Module Smart Harness replaces the need for a complete network backbone in a small system, meaning a robust, simpler and more cost-effective installation.

The Smart Harness can also be fitted independent to any CZone installation where a small network comprising 3 devices is required.

- · All in one smart-harness for straight forward plug & play installation.
- 3 Module Smart Harness connects two 6-button Waterpoof Keypads to the Contact 6 PLUS Module.

• Not required when connecting to NMEA 2000 network. The Smart Harness contains internal network terminations and will compromise a standard backbone.
