

Spare headlight

Each cable has its position and needs to respect cable colour in each slot, yellow = common.

NOTE FOR THE DOUBLE VERSION: Starting from 2017 in the deliveries of the 7100001312-24 there is an haloghen version (only with 1 filament) to increase the lifetime of the bulb, So the grey cable included in the spotlight doesn't need to be connected. The remote control Will work in on (lever up) – off position and not in on-off-on as before. For the other 2 single version green cable is related to the spot type of light and grey to the deep type of light
